Table System 900.

The Amazing Elevating Table – What You Always Wanted

Merkt presents a new kind of table. The name lectern worktop does not do it justice. The height of this “elevator table” can be adapted to any situation extremely easily. Thanks to its pneumatic spring mechanism the table top glides gently to whatever height its user requires – be it for a champagne reception or for storing filing next to a workstation. The elevator table is available on castors, so that it can be wheeled to wherever it is needed. Or it can stand in a fixed location, on a stable floor plate. A multifunctional table, an essential feature in any office or reception environment. Flexible and as valuable as a full-blown workstation system.

All variants can be combined with floor plates. The tables equipped with pneumatic springs can also be combined with base elements on castors or glides.

① **Height adjustment** The height is adjusted by means of pneumatic springs using hand or foot-operated controls. Height adjustment range: 720-1160 mm. There is also a fixed-height and an adjustable version using regular perforations in the frame.

② **Guiding mechanisms** High-grade roller guiding mechanisms make for maximum stability and optimum gliding qualities.

③ **Base** Interchangeable innovative plates and mobile base elements make it easier to suit individual customer requirements.

④ **Finish** Frames are supplied with a highgrade powder coating. Various sections of the frames are also available in stainless steel or chromed versions.

The pedal for adjusting the height can be adapted for any table-top diameter.

Its foot-pedal makes the pneumatic spring-assisted height adjustment mechanism easy to operate.

An innovative rubber edge protects the level-adjustable floor plate from damage. "Inlays" with various finishes are available.
